

NEDERMAN FA 7 PRE SEPARATOR UNIT

CONNECTION

The FA7 connects inline with the extraction system to stop liquids and large particulate from entering the filter. By removing these hazards before they enter the system, the user can expect a greater lifespan from their ducting, hosing, filters and units.

Floor cleaning kits can be added to the system in order to remove liquids and swarf from the production area.

DESCRIPTION

The Nederman FA7 unit separates liquids and objects to prevent them from going into a stationary piping system.

The FA7 preseparator is ideal in vehicle repair shops, metal fabrication industries and wherever scraps of glass, metal and other coarse materials need to be removed. FA7 is also perfect for picking up water and cutting fluids.

TECHNICAL SPECIFICATION

Container Volume	70 litres
Dimensions	1240 x 680 x 500
Container Diameter	360 mm
Weight	40 kg
Inlet	Ø 50 mm
Outlet	Ø 50 mm
Airflow	400 m ³ /h

PART CODE/ORDERING TABLE

Nederman FA 7 Preseparator	DF-DS03-001
