DESCRIPTION

The Dustcontrol DC 2900c uses negative pressure (suction) to force the air through a suction cover/ nozzle, hose system, pre-separator and dust separator. Coarse separation is carried out in the machine's cyclone, providing very effective separation of any coarse dust. Fine dust is separated in the units filter.

Reverse-pulse filter cleaning ensures extended filter life. The machine is fitted with a HEPA filter. The DC 2900 is our most popular dust extractor. It is suitable for vacuum cleaning and source extraction from handheld power tools (with up to 5" suction casings) and small table saws. The DC 2900 can be ordered with a plastic bag (DC 2900c) or with a steel container (DC 2900a).
