| GT 230m | |
| Power | 0.5hp 0.4kW (230V) |
| Flow-rate | 900m ³ /h |
| Outlet Hose Diameter | Ø125mm |

DESCRIPTION

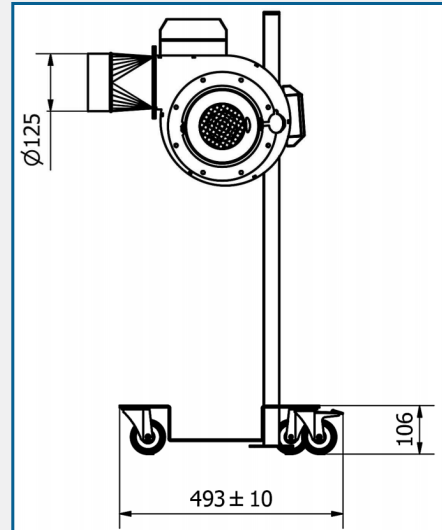

The GT is a portable exhaust fume extractor suitable for Class 4 vehicles, such as cars, motorbikes or vans. The inlet of the system allows for the connection of various hose and nozzle types.

A set of four casters allows the extraction system to be maneuvered into place with ease. A heavy duty handle located at the rear of the system helps with positioning.

The system includes a 10 meter long extension of hosing. This hosing is attached to the rear of the system, and when placed outside will expel the extracted fumes out of the workshop.

Fitted with an on/off switch system.

DIMENSIONS

OPERATION

The GT system directly extracts the exhaust fume from the exhaust tip, and expels the contaminated air through a connected length of hose.

This hose length should be placed outside of an external door or window in order to ensure all fumes are removed from the vehicle workshop.
